

Description

NoSpot - as the name suggests you get a continuous and even light along the whole length - this is an LED Strip which is perfect for DIY installation as it comes with a range of solder free connectors. It's small size means it can be used in most aluminium profiles whilst it's DOTFREE performance means even very low profile profiles perform well.

It is a vertical bend design and is available with SOLDER FREE connectors which mean connection is quick, easy and reliable.

It operates at 24V and a maximum of 9w per metre and if powered from one end the maximum single length is 10m, however if you want a longer length we can make this for you but you will need to provide power to both ends.

NoSpot has a 3M adhesive backing for easy installation.

Specifications

Operating Voltage	24v
Wattage	Max 9w
